**FLEETFLIX™**  
SEE WHAT'S AHEAD

## ADD-IN GUIDE

### ADD-IN PROCESS

- The Support Manager will need to be added to the database that the cameras will be associated with
  - Support will add the FleetFlix API and Support User
  - Support will associate the database with the FleetFlix cameras
- The FleetFlix Add-in will need to be added:
  - Go to System Settings – Add-ins – New Add-in and then paste the code below
- The cameras will automatically populate inside their associated database
- If you are installing without a Telematics device the only difference will be that your Support Manager will add your cameras unique Geotab SN in the Vehicles Tab in Geotab
- The cameras are ready to install

### FLEETFLIX ADD-IN CODE

Powered by cutting-edge AI technology, FleetFlix cameras actively detect risky driving events and unsafe behaviors, delivering real-time reminders to drivers on the road. This not only mitigates potential risks but also acts as a valuable tool for driver training. The camera seamlessly uploads events to the Geotab platform, providing a comprehensive overview for strategic decision-making. Stay ahead with real-time and accurate vehicle position information and operational data transmitted directly to the MyGeotab™ platform. FleetFlix Dash Cameras ensure that you have the insights you need for effective resource management. Experience the convenience of high-quality Live Streaming and video live view playback, making fleet management easier and more efficient than ever before. Elevate your fleet's safety and efficiency standards with FleetFlix Dash Cameras – where innovation meets reliability for a smarter and safer journey.

### Logging In:

- Please log into your my.geotab.com database
- You will see the main dashboard for your database

### Navigating to the FleetFlix Add-In:

*This will appear underneath “Add-Ins” once it has been added to your database. If not present, please immediately contact our support team for assistance.*

- This is done by selecting “Add-Ins” on the far left of your screen and clicking the drop-down arrow for “FleetFlix AI” then selecting “Cameras”:

c) Name: Underneath “Name” you will find some important status information for each device.

a) Name of the device

b) The serial number or Geotab device the camera is paired with

c) The status of the camera – there are three types.

- Online: this will be in green. It means the ignition is on & the vehicle is moving. The camera is actively recording when its in this state.
- Standby: this will be in orange. It means the vehicle’s ignition has been turned off and the camera will stay in standby mode for 30 minutes. So if at any time you need to gather footage/events, once the truck has been turned off, you have some time to download/view that footage.
- Offline: this will be in red. During this state, the camera is not connected to the network, and it is not actively recording.

d) IMEI:

The IMEI is the number used to identify each device.

e) Current driver & License plate:

You will also see an option to assign a driver and license plate number to each device as well.

### **Live Stream:**

*To the far right of each device, you will see an option to view live stream footage.*

a) Clicking the dropdown arrow, you will see a few options:

- Front Camera
- Driver Camera
- Auxiliary Cameras (if installed)

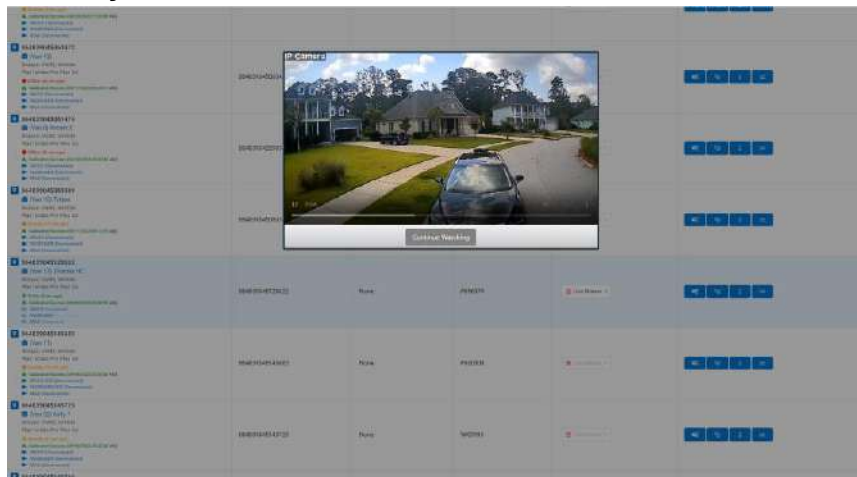

## Driver Camera:

## Auxiliary Camera:

**PLEASE NOTE!: We do not recommend constant live streaming as this will affect data usage for your device.**

## Individual Device Settings & Calibration Status:

Begin by clicking on the name of the device. Doing so will take you to your next screen: here you will see three sections: Profile, Rule Settings, and Measurements. If utilizing auxiliary cameras, you will also see Router Settings and Aux. Settings.

### Profile:

This is where the specific information for each device is listed.

- a) IMEI: This is where the IMEI of the device is listed.
- b) Description: This is where you can name the device.
- c) Geotab vehicle: This is where you can pair your device with the appropriate Geotab vehicle, if GO9s are being utilized. If GO9s are not being utilized, please disregard.

## Rule Settings:

*This page allows you to set your camera to capture different events:*

The screenshot shows the 'Camera Edit' interface for a specific camera (ID: 864839042297966). The 'Rule Settings' tab is active, showing various event capture options. At the top, there are 'Save' and 'Cancel' buttons. Below the camera ID, there are tabs for 'Profile', 'Rule Settings', 'Measurements', 'Preset Settings', and 'Axis Settings'. A note states: '\*Changes will not be effective on current trip. Changes will be effective on the next trip or next reset.' The settings are organized into sections: 1. 'Button Pushed': Set to 'Long Video' with a dropdown arrow, and 'In CAB Alert' is checked. 2. 'Camera Stopped': Set to 'Snapshot' with a dropdown arrow, and 'In CAB Alert' is unchecked. 3. 'Possible Collision': Set to 'Long Video' with a dropdown arrow, followed by a slider from 'Least sensitive' to 'Most sensitive' (set at 3.5), and a '3 s' button. 4. 'Driver Disconnected': Set to 'OFF' with a dropdown arrow, and 'In CAB Alert' is unchecked. 5. 'Driver Facing Camera': Set to 'ON' with a dropdown arrow. 6. 'Driver Exiting': Set to 'OFF' with a dropdown arrow, and 'In CAB Alert' is unchecked.

### a) 5 Options for Capturing Event Data:

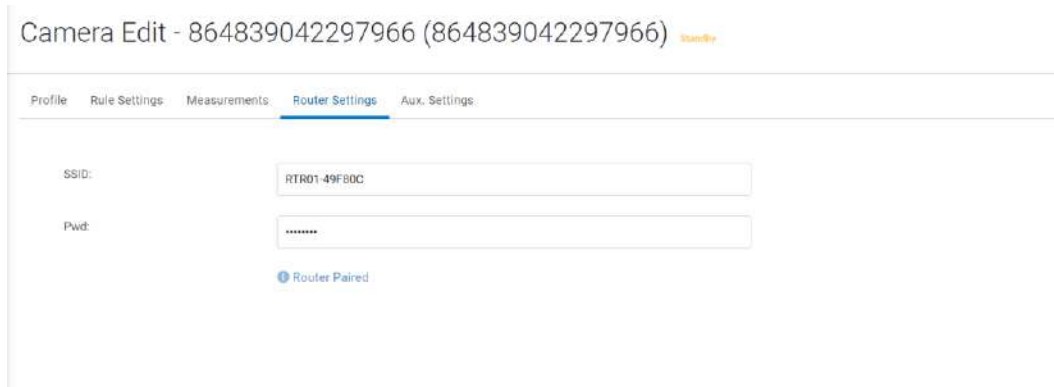

- Off: this means you will not receive any notification for that rule.
- Event only: you'll receive just a notification that an event occurred.
- Short video: you'll receive a short video, 3 seconds before, 2 seconds after.
- Long video: you'll receive a long video, 5 seconds before, 5 seconds after.
- Snapshot: is just that, a snapshot/photo.

#### b) Types of Events:

- **Button pushed:** this button is available for the driver to push in the event of something important, such as an accident, etc. This creates a timestamp of the event. We recommend setting this one to “Video” with the assumption that if the driver is taking time to press this button, it is probably important.
- **Camera blocked:** this means there is something obstructing the camera lens. Please note this alert is only for the in-cab lens not the road facing. For this we recommend just a snapshot.
- **Collision:** this obviously triggers in the event of a collision. You can adjust the sensitivity for this.
- **Driver distracted:** this triggers when the driver’s eyes have been off the road for 2 or more seconds.
- **Driver facing camera:** you can disable the in-cab camera. Whatever your company policy is will be fine here.
- **Driver fatigue:** for this the camera is looking for head nodding, heavy eyelids, if the driver’s head rolls back, things like that to indicate that maybe the driver needs to pull over, take a break, etc.
- **Driver Phoning:** this triggers if the camera detects a phone in the driver’s hands.
- **Hard brake & hard cornering:** these are both triggered by side-to-side movement. The sensitivity can be adjusted for these as well.
- **Harsh acceleration:** This will trigger if the driver accelerates faster than normal, again you can adjust the sensitivity.
- **Lane departure:** this feature allows the camera to tell you if the driver switches lanes without using turn signals, or if the driver is swerving. For this feature to work, the camera does have to be wired into the turn signal using the grey and pink wires. (Grey-left, Pink-right)

- Tailgate warning: this triggers if the driver is following the vehicle in front of them too closely. The sensitivity for this is the number of seconds before impact would be made. Again, you can adjust this.
- Trip snapshots: this enables the camera to take snapshots every 2 minutes on a trip, which will appear over in the MAPS section, which we'll get to in just a minute here. – Just a general note, but this does use quite a bit of data – so only use it if needed, otherwise, we recommend you leave it off.
- Record audio: this allows for the camera to record in-cab audio. Please note, you cannot hear audio when live streaming, you can only hear it once the footage is downloaded.
- Wakeup Sensitivity: If ignition is off and the camera experiences a G-Force against it, the camera will wake itself up to capture what caused that to trigger and stay in that mode until turned back off.
- Idle time: this is when the vehicle is not moving, but you need the camera to keep recording. For instance, if you had a concrete truck – you need the vehicle to stay on to keep moving, but you don't need your camera to keep recording for that long, you can set that time limit here.
- Standby time: this is when the vehicle has been turned off and stays there for 30 minutes to allow access to footage that you may need before shutting down.

c) Router Settings: This is where you will enter the SSID and password to pair your router to the main dash camera.

d) Aux Settings: This is where you will see the specific auxiliary cameras listed, along with a photo of their most recent trip.

## Bulk Editing Rules:

Here is where you can edit the rules for all of your devices at one time.

a) Do so by clicking on the “FleetFlix AI” drop down menu and choose “Rules”:

## Fleet Rules Settings:

*This page looks the same as the individual rule settings page for each device, however there are a few differences to note.*

### a) Types of FleetFlix devices

*At the top of the page, you will see three different FleetFlix device types. Please ensure the correct device type is chosen for your fleet/devices you are trying to edit in bulk. If there are ever any questions about this, please contact our support team.*

- FleetFlix AI+ Pro
- FleetFlix Lite Pro
- FleetFlix Lite

b) Fleet Override: This button allows you to apply a rule setting to your entire fleet of devices at once.

c) In CAB Alert: This button allows you to enable the device to emit an audio alert to the driver each time a rule is broken.

d) Display in miles per hour in subtitles: this option allows the M/HR to be included in the video text overlay at the top of each event and recording. **\*\*ONLY FOR FF LITE & FF LITE PRO DEVICES\*\***

e) Once all desired settings are chosen, hit “Save” in the top left corner. You will then receive a message stating that the changes will be made effective when the device goes on its next trip.

The screenshot shows the 'Fleet Rules Settings' page. On the left is a sidebar with a search bar and a list of categories: Productivity, Compliance, Safety, Maintenance, Sustainability, People, Add New, FleetFlix AI, Messages, Hardware, Reports, Groups & Roles, Marketplace, Support, and System. The main content area is titled 'Fleet Rules Settings' and includes a 'Showing 16 camera rules' indicator. Below the title are tabs for 'General Rules' and 'Device Rules', with 'General Rules' selected. A note states: 'Changes will not be effective on camera rules. Changes will be effective on the next trip or next report.' The settings are organized into rows, each with a dropdown menu and a 'Fleet Override' checkbox. The rows are: 'Rearview Camera' (set to 'OFF'), 'Camera Shutoff' (set to 'Event Only'), 'Proactive Collisions' (set to 'Long Slow'), 'Display miles per hour in subtitles' (set to 'ON'), 'Driver Distraction' (set to 'Event Only'), and 'Driver Tailing Camera' (set to 'ON').

**PLEASE NOTE!: Events only stay stored on the cloud for 4 months before being overwritten.**

### Geotab Rules:

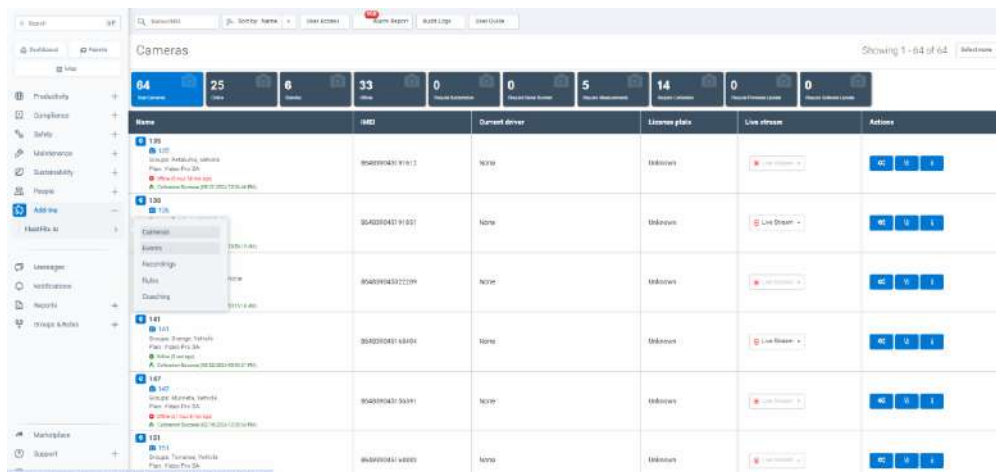

*This is found at the top of the page as well. If you have Geotab devices, this is where you can apply your Geotab rules in bulk for your devices, if applicable*

### Events:

*This is where you can view all events triggered for your devices.*

a) In order to do this, simply navigate to the “FleetFlix AI” drop down menu and choose “Events”:

### Options:

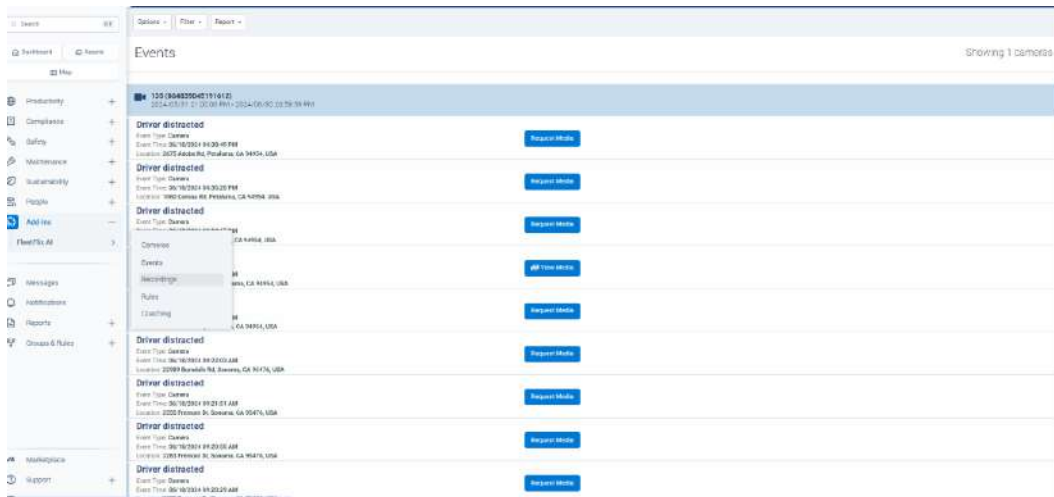

*Once on the “Events” page, you will see an “Options” box populate. You can search by the following parameters:*

- a) Date period
- b) Group
- c) Camera (name)
- d) IMEI
- e) Event type

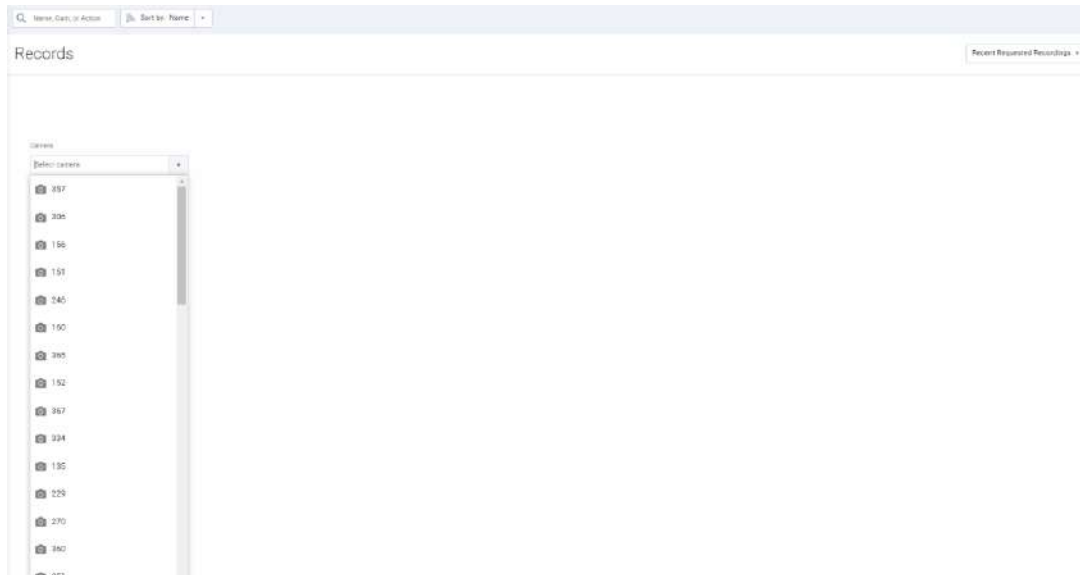

a) Select your camera from the dropdown menu.

b) Camera type:

- Front – only populate road facing footage
- Rear – only populate in-cab footage
- All – populate both Front and Rear footage

c) Date: choose your desired date to view.

g) View Media: Once you select “View Media” a video box will populate for either the Road facing or Driver facing camera. Each recording has a video text overlay as well:

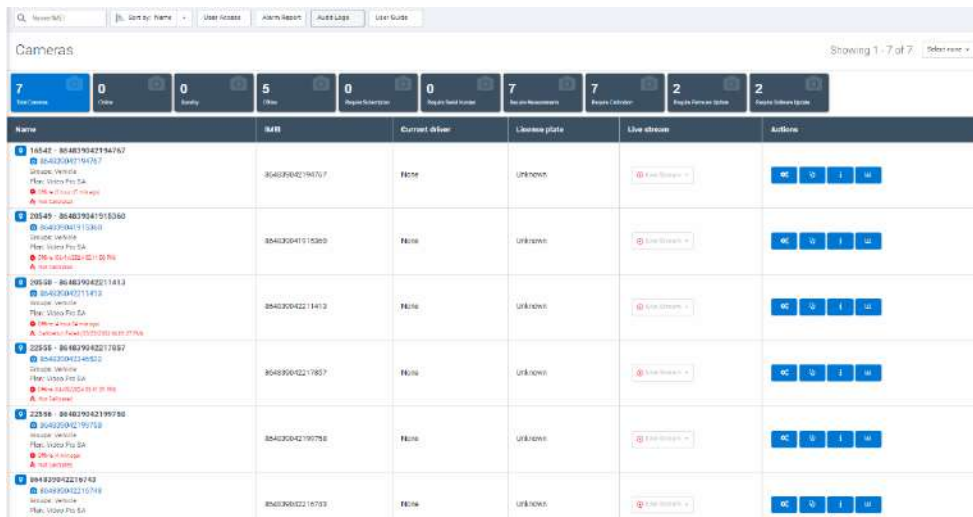

h) Downloading Footage: From here you can view then download the footage if desired. Once downloaded it is stored on your computer for your records. If you have in-cab audio enabled, you can hear the audio through downloaded recordings as well.

**PLEASE NOTE!: Your device must be “online” or in “standby” mode in order to request and view recording footage. If the device is “offline” it will stay in the queued stage until back online.**

## Audit Logs:

*This is where you can view any changes that are made in the FleetFlix Add-In*

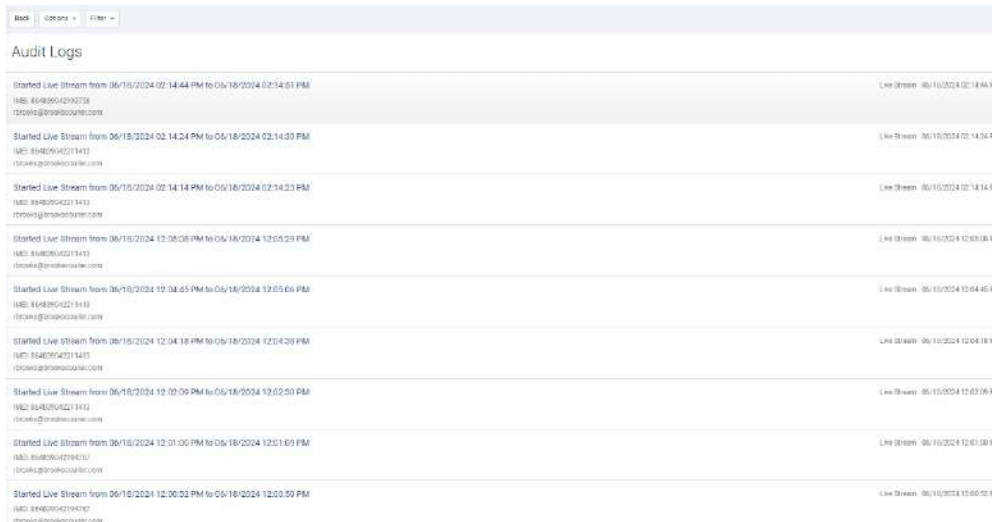

a) In order to view the “Audit Logs” for the FleetFlix Add-In, simply navigate to the main “Cameras” page and at the top select “Audit Logs”:

The screenshot shows the 'Cameras' management interface. At the top, there are tabs for 'Cameras', 'Users', 'Alarms', 'Audit Logs', and 'Live Feeds'. The 'Audit Logs' tab is currently selected. Below the tabs, there is a summary row with various counts: 7 Cameras, 0 Users, 0 Alarms, 5 Audit Logs, 0 Reports, 0 Reports, 7 Reports, 7 Reports, 2 Reports, and 2 Reports. Below this is a table listing camera details.

Name	ID	Current Owner	License Plate	Live Stream	Actions

b) Once selected, you will be taken to a page that lists all changes made in your FleetFlix Add-In. It details the device edited, the user who made the change, along with a date and time stamp. There is an “Options” filter at the top you can utilize to view a specific date range or specific edit type:

The screenshot shows the 'Audit Logs' page. At the top, there are tabs for 'Back', 'Options', and 'Filter'. Below the tabs, there is a table listing audit log entries.

### Add Recipients

Email:

Notification Rules to Subscribe:

- ☐ Button Pushed
- ☐ Camera Blocked
- ☐ Collision
- ☐ Driver Displaced
- ☐ Driver Fatigue
- ☐ Driver Phoning
- ☐ Tailgate warning

h) Updating Email Settings: Once added, choose “Save” in the top left corner and you will be taken back to the “Email Settings” page. Next to each email, you will see a few options:

- Delete: this removes a recipient
- Update: this option allows you to apply specific rules to that recipient. Here you can choose your desired rules to subscribe to notifications for.

i) Once selected, hit “Save” in the top left corner to apply these changes.
