

Enhancing fleet operations through telematics

Geotab GO Devices

Real-world reliability. Built on trust. Engineered for what's next.

Fleets today are operating in an increasingly complex environment where visibility, efficiency, and security are constantly under threat. The new suite of GO devices offers robust data insights tailored to your fleet on a unified next-generation platform.

Whether you need essential tracking or complex enterprise features, both devices share a resilient foundation designed to keep your fleet online and operational. Transition from passive tracking to active management by consolidating security, control, and intelligence into a single, future-proof platform.

Right-sized performance to meet your fleet needs

The GO product suite offers a consistent baseline of high-performance features, delivering robust and powerful fleet insights to help you address your top operational challenges.

Powerful architecture

Optimize your operational efficiency through reliable performance and best-in-class data fidelity.

Scalability & control

Unlock expanded operational use cases, insights into vehicle and equipment states, and enable remote tasks.

Resilient connectivity

Experience a high-speed and reliable network, simplifying deployment and logistics for global operations.

Asset protection

Gain immediate awareness of device tampering upon power loss, giving you a head start on recovery.

Extended visibility

Get visibility beyond the vehicle into work assets, simplifying layering on tracking capabilities without extra hardware.

Reduced hardware complexity

Simplify installation with multiple consolidated IOXs, ensuring utility for specialized needs.

Meet the Next Generation of fleet intelligence

Next Gen GO

Essential performance for modern fleets

Device Version: G010

Secure your operations with a high-performance device designed for modern fleets. Serving as a universal operations hub, it enables advanced asset visibility, control, and protection.

GO Plus (coming soon)

Enterprise power for complex operations

Device Version: G010 Plus

Extend the Next Gen GO capabilities with advanced features to future-proof your most demanding operations. Scale your complex fleet while maintaining visibility, productivity, and security.

Next Gen GO Features

Native Bluetooth®

Connect wirelessly to beacons to enable seamless small asset tracking.

Global 4G LTE Connectivity

Upgraded CAT1 cellular modem ensure reliable, always-on fleet connectivity.

Expandability and Video

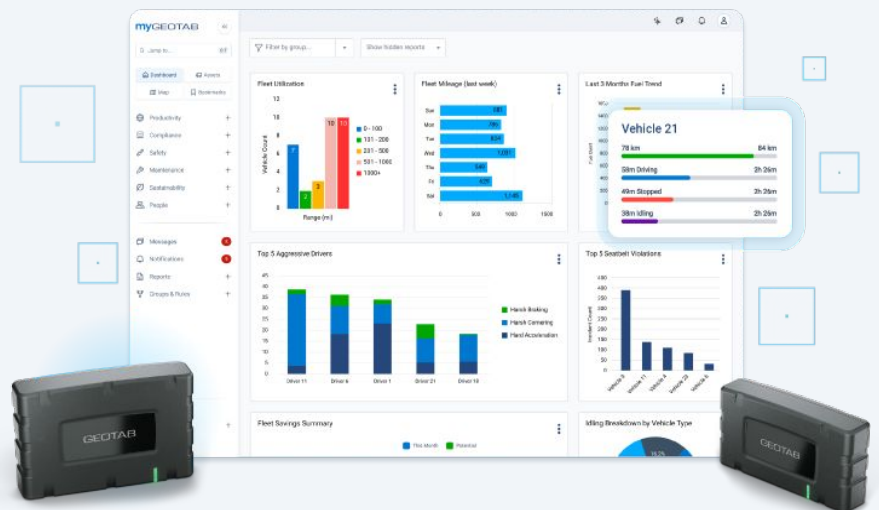

Meet specialized industry needs with built-in IOX support and dash cam integration.

Energy Reserve

Built-in power reserve acts as a digital tripwire, alerting you if the device is unplugged.

Integrated Auxiliaries

Monitor real-time status of PTO, driver seatbelt, cargo door etc and trigger remote immobilization directly from MyGeotab.
